External Short Circuit	N/A	No fire and no explosion	After standard charge, short-circuit the cell at $20^{\circ}\text{C} \pm 5^{\circ}\text{C}$ until the cell temperature returns to ambient temperature (cross section of the wire or connector should be more than 0.75 mm^2).	*
Safety Device Operation	N/A	No explosion	Forced discharge at 0.2 C to a final voltage of 0 V, then the current be increased to 1 C and forced discharge continue for 60 min.	Leakage of electro- lyte and Deforma- tion are acceptable.
Free falling (drop)	N/A	$\Delta V < 0.02 \text{ V/cell}$ $\Delta Ri < 5 \text{ %/cell}$	Charge at 0.1 C for 16 h, and then leave for 24 h, check battery before/after drop. Height: 50 cm Thickness of wooden board: 30 mm Direction is not specified. Test for 3 times.	*

- It is permissible to allow sufficient open-circuit rest time after the completion of discharge at cycle 50, so as to start cycle 51 at an exact two-week internal. A similar procedure may be adopted at cycles 100, 150, 200, 250, 300, 350, 400 and 450.
- If cell discharge voltage drops below 1.0 V/cell, discharge may be discontinued.
